Electric Mortise Lock

Monitoring Features:

- Dead latched and locked
- Door position/Reed switch
- Dual key override monitoring
- Request to exit/REX
- LED indication

Field Changeable Settings:

- Fail safe/fail secure configuration
- Multi-voltage - will work on 12-24 Vdc systems
- Handing - left hand and right hand doors
- Selection of fire lever or lockable lever on both sides of the door
- Key override monitoring either side of the door
- Monitoring contacts - normally closed, normally open (for key override and request to exit only)

Power Lead Transfer

LC8810

Description

The LC8810 is a shorter unit suitable for hinged doors which open to 90° (maximum of 120°).

LC8811

Description

The LC8811 is designed for use on doors which open more than 120°, or have a gap from pin hinge to door frame of more than 20 mm.

Note: Not suitable for centrally pivoted doors.

Electric Rim Lock

Backset:

adjustable 50-50-75/80 mm, with a simple operation using the Allen key provided. For the version with round cylinder: 70 mm for the version set up for profile cylinders.

Functions:

- service (standard) the lock opens with the electric impulse and only resets once the door/window has been opened and then closed. It is therefore suitable for use with door closers and/or all types of automation systems.
- security (optional) the automatic resetting is inhibited, so that the lock opens only when electric impulse and manual or automatic pressure are applied simultaneously. It is therefore not advisable to use it with a pushbar and/or accessible automation systems.

Double replaceable coil:

which distributes the load uniformly and ensures a long working life.

Voltage:

standard 12V AC (on request 12V DC; 24V AC or DC)
